1. Claims 4-10 and 14-15 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim must refer to their parent claims in the alternative only, and may not be dependent from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, these claims have not been further treated on the merits.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 11-13 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petersen (WO 91/14935) taken with Brown et al (US 5,373,365).

Petersen shows a method and apparatus in which dirt on a surface is measured by placing an adhesive film in contact with the surface and optically measuring the dust and dirt adhering to the adhesive film. Petersen shows measuring the adhering dirt by a transmission measurement rather than by reflection. Brown et al shows a similar system in which an adhesive element (12) is placed in contact with a surface to pick up dust and dirt on the surface and then dust and dirt adhering to the adhesive surface is measured by a reflection test; see the various figures for various types of reflection tests. It would have been obvious

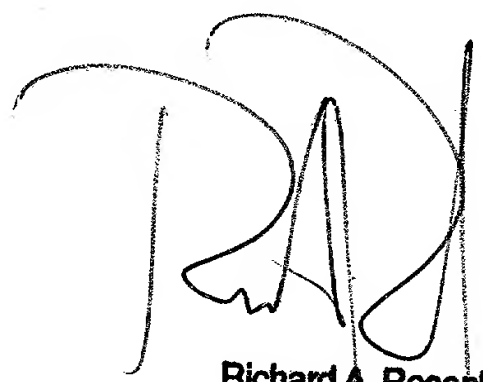

Art Unit: 2877

to measure the dust adhering to the film of Petersen by a reflection test because, as shown by Brown et al, that is a known manner of testing an adhesive surface for dust and dirt adhering thereto in order to determine the cleanliness of a surface with which the adhesive film had been placed in contact.
